INTRODUCTION

As a product of the California Cooperative Occupational Information System (CCOIS), formerly known as the State/Local Cooperative Labor Market Information (LMI) Program, this PROJECTIONS report is for the use of a variety of individuals and organizations interested in the labor market. Combined with other data, the projections presented here can help students, jobseekers, and counselors identify promising career and employment directions; they can help vocational education and training planners decide which programs to initiate, expand, decrease or eliminate; and they can help private sector economic development planners and private industry decision makers plan for the future. In addition to this report, the CCOIS will provide one or more reports and analyses of specific occupations which have been surveyed locally for employer information about the availability of trained workers, recruitment practices, qualifications needed, earnings and hours, advancement patterns, and outlook. These reports will be available through the San Mateo Private Industry Council. For more information contact your local Private Industry Council at (415) 599-3840.

These projections show the expected change in the number of jobs in an area both by industry (where the jobs are located within the economy) and by occupation (what the jobs are) over a six-year period. The report addresses industry and occupational changes separately, with each section covering projections for the same time period.

This report is divided into several sections. It begins with an area profile and is followed by a detailed discussion of trends for major industry divisions and occupational groups, and includes tables which show detailed industry and occupational employment projections. A discussion of the data sources and underlying economic assumptions follows this. Finally, an alphabetical index of the occupational categories used in this report is presented.

The projections contained in this report were developed using an Occupational Employment Statistics (OES) survey-based industry-occupational matrix system. The report includes wage and salary employment, but does not include self-employment or agricultural employment, with the exception of selected agricultural services. For a more detailed description of the methods and data sources used in this report, see the Methods and Economic Assumptions section.

SAN MATEO COUNTY

AREA PROFILE

SAN MATEO COUNTY

The County of San Mateo is located on a mountainous peninsula in Northern California. It is bordered on the west by the Pacific Ocean and on the east by the San Francisco Bay. San Francisco County lies to the north and Santa Clara and Santa Cruz counties to the south. The maritime climate provides year-round cool temperatures, with morning and evening fog common in the western part of the county. At 449 square miles, over 680,000 residents and over a quarter-million housing units, the county has an overall population density of about 1,500 persons per square mile. However, the coastal mountain range bisects the county, limiting the western side to such rural uses as agriculture, game preserve, watershed, parks, and undeveloped lands. In addition, some restricted coastal developments, including the cities of Daly City and Pacifica, are located on the west coast. In contrast, the eastern side of the county is densely-populated low land fronting San Francisco Bay making up the middle of a continuous urban area stretching from San Jose (Santa Clara County) in the south to San Francisco in the north. The eastern half contains the major transportation arteries and facilities: U.S. Highway 101, Interstate 280, the San Mateo and Dumbarton Bridges, San Francisco International Airport and the deepwater port of Redwood City. Local transportation is also provided by passenger railroad and county bus service.

About 200,000 of San Mateo's labor force work in the county; the remaining 150,000 commute to neighboring counties. In addition to the residents, the county imports almost 100,000 workers to supply labor for approximately 290,000 wage and salary jobs. Two-thirds of these jobs are concentrated in the services, retail and wholesale trade, and transportation sectors. Many of San Mateo's jobs were developed to support San Francisco's tourism, corporate headquarters and international trade, and the Silicon Valley electronics manufacturing area of Santa Clara County. Millions of people enter the county through San Francisco International Airport en route to these two destinations.

San Mateo, San Francisco, and Marin counties comprise the San Francisco Primary Metropolitan Statistical Area (PMSA).

INDUSTRY TRENDS

INDUSTRY CHART

EMPLOYMENT BY MAJOR INDUSTRY

SAN MATEO COUNTY 1986 - 1992 - 1998

TABLE 1

GOVERNMENT ⁽²⁾	31,000	11.5%	33,000	11.3%	32,700	10.4%

(1) Preliminary March 1992 Benchmark. Employment is reported by place of work and excludes self-employed persons, unpaid family workers, and those involved in labor-management trade disputes. These data are based on Standard Industrial Classifications. Annual average industry detail may not add up to totals due to independent rounding. Projections data exclude some service workers.

(2) Includes all civilian government employees regardless of the activities in which they are engaged.

INDUSTRY TRENDS AND OUTLOOK

From 1992 to 1998, nonagricultural employment in San Mateo County will grow by 20,300 jobs, including both full-time and part-time positions. This represents a 6.9 percent job growth rate for this six-year period, a slower rate than the 9.1 percent of the prior six-year period (1986 to 1992). In the 1990s, job growth is expected in all industry divisions, except government.

The **services** industry division will gain the majority of new jobs during the forecast period. Currently accounting for more than one-quarter of all jobs in San Mateo County, this division will add almost 11,000 new jobs between 1992 and 1998. Business services, health services and engineering and related services are the largest categories within the division. Substantial payroll gains are expected for business services, including its largest component industries: temporary help supply services and employment agencies, computer-related services, building maintenance and detective, guard and armored car services. Recent labor market trends show an increase in the number of temporary workers and an increase in the amount of business functions (e.g., cleaning, maintenance, security, computer services) outsourced by mid- and large-size companies. Payrolls will also expand within the engineering, accounting, research, and management services group. Employment within this group will increase by 1,500 during the forecast period. Meanwhile, health services will add 1,600 jobs, particularly in doctors' and dentists' offices, nursing care facilities, home health care services and outpatient clinics. In comparison, hospital payrolls will grow at a much slower rate than payrolls of other health care facilities, largely due to consolidation and decreasing demand for inpatient services. Among other growing service industries, the hotel and motel industry and amusement and recreational services will each add several hundred jobs between 1992 and 1998. Increasing passenger traffic at San Francisco International Airport and stronger Bay Area ties to the Pacific Rim business community promise a growing demand for hotel and motel rooms and amusement and recreational services.

The **transportation and public utilities** division will gain 4,100 jobs between 1992 and 1998, mostly in air transportation. The latter part of the forecast period should prove particularly strong for air transportation employment at San Francisco International Airport in light of the expansion of the international terminal. Local and interurban transportation payrolls will increase by 20 percent to handle the expansion of the airport, a growing population, traffic congestion and air quality regulations. Other transportation industries will grow at a slower pace. Meanwhile, employment in the communications and utilities industries will decline as jobs are transferred out of the county or lost due to advances in technology.

Retail trade will experience moderate job growth during the forecast period. The largest employment gains are expected in restaurants and food and electronics stores. Increasing numbers of visitors and a growing population will spur a healthy demand for more retail trade. However, this demand will temper job creation as consumer spending trends shift. Department stores will end the forecast period down 600 jobs. All other retail trade sectors will show some employment growth.

Wholesale trade will add 1,500 new jobs between 1992 and 1998. Employment gains will be made in both nondurable-goods and durable-goods wholesaling. Some of this gain is from increased trade through the international airport and the port of Redwood City.

Employment within the **manufacturing** division will increase by 1,100 jobs during the forecast period. However, most of the job growth will occur in six industries. The industries with the largest payroll gains will be: chemical and allied products (including biotechnology), printing and publishing, instruments, and machinery (including computers). The county will continue its leadership in the development of biotechnology, as well as technological development in computers and multimedia, scientific instruments and fiber optics.

Construction industry employment is expected to end the forecast period, in 1998, with 300 more jobs than in 1992.

Payrolls within the **finance, insurance and real estate** industry division will increase by 100 jobs during the forecast period. The insurance and real estate industries will each add hundreds of jobs. In contrast, the financial sector will shrink as financial institutions continue to reduce their payrolls.

Government payrolls will shrink between 1992 and 1998. Most of these job losses will be in federal defense and nondefense facilities as federal budget expenditures for payrolls decline. Employment will also drop in state, county and city government. All of the (net) new jobs during the forecast period will be in local education and special districts.

OCCUPATIONAL TRENDS AND OUTLOOK

This section of the report provides a discussion of major trends for the occupational groups in Table 6. Projected changes in the level of employment in each occupation between 1992 and 1998 give an estimate of the number of new jobs expected during the six-year period.

Changes in the employment levels of the various occupations reflect changes in the area's overall level of economic activity, differences in the rate of growth or decline among the various industries, and changes in the occupational structure within individual industries. Changes in occupational structure are determined by such factors as technological change, changes in product demand, and the adoption of more efficient business or production techniques. Economic growth tends to ensure an increase in demand for widely used occupations, such as sales. However, the growth in specific industries, such as health care and its related occupations, may bring about an increase in demand for other less prevalent occupations.

Between 1992 and 1998, the number of jobs in San Mateo County is expected to increase by 6.9 percent. In addition to 20,300 job opportunities created through industry growth, another 40,710 jobs will become available as a result of separations. The "separations" data are partial estimates of the number of entrants who will be needed to fill openings created by people leaving an occupation. The total number of openings would be much larger, especially if we included those resulting from people changing jobs but remaining in the same occupation. See the Methods and Economic Assumptions at the back of this report for a fuller explanation.

MANAGERS AND ADMINISTRATIVE OCCUPATIONS

The number of managers and administrators in the county is expected to grow from 24,040 in 1992 to 25,850 in 1998. This is somewhat faster than the average rate of growth for all occupations in the county. Separations will account for an additional 2,150 job openings.

OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE MANAGERS AND ADMINISTRATIVE WORKERS GROUP(1)

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL
MANAGERS AND ADMINISTRATIVE	24,040	100.0%	25,850	100.0%
GENERAL MANAGERS, TOP EXECUTIVES	9,060	37.7%	9,680	37.5%
FINANCIAL MANAGERS	2,430	10.1%	2,530	9.8%
MKTING, ADV, PUB-REL MANAGERS	2,000	8.3%	2,200	8.5%
ENGINEER, MATH, AND NAT SCI MGRS	1,870	7.8%	2,080	8.1%
PROPERTY AND REAL ESTATE MANAGERS	1,020	4.3%	1,080	4.2%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

This occupational group contains managers, administrators, executives, and officials in all industries. Employers reported 38 percent of all managers as general managers or top executives with widely varied duties. Among more specialized managers, the largest number of new jobs will develop for engineer/ math/natural science managers and marketing/advertising/public relations managers.

PROFESSIONAL AND TECHNICAL OCCUPATIONS

The professional and technical group is the third largest occupational group in the county and includes 20 percent of all local workers. About 25 of its occupations have 500 or more workers. They include many highly trained workers such as registered nurses, accountants, lawyers, computer programmers, civil engineers, teachers, instructional aides and computer systems analysts.

The number of professional and technical workers will grow by 8.2 percent during the projection period, reaching a total of 63,760 by 1998. An additional 5,900 job opportunities will be created by separations. The fastest growing professional and technical occupation will be computer engineers.

OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE PROFESSIONAL AND TECHNICAL GROUP(1)

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL
PROFESSIONAL, PARAPROF, TECH	58,960	100.0%	63,760	100.0%
TEACHERS--ELEMENTARY SCHOOL	3,910	6.6%	4,240	6.7%

COMPUTER PROGRAMMERS, INCL AIDES	2,070	3.5%	2,280	3.6%
ACCOUNTANTS AND AUDITORS	2,090	3.6%	2,240	3.5%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

It is particularly important, when using data from this report on professional occupations, to realize that the employment levels include only wage and salary or payroll employment, and do not include self-employed workers. Self-employment makes up a large proportion of all jobs in many professional occupations such as physicians or dentists. Consequently, our figures for these types of occupations will be very different from those in other sources of data that include self-employed individuals.

SALES AND RELATED OCCUPATIONS

These workers are employed primarily by retail stores, manufacturing and wholesale firms, insurance companies, and real estate agencies. Jobs in sales occupations totaled 37,280, or 12.7 percent of all wage and salary employment in the county during 1992. These occupations will gain 2,400 workers, reaching a total of 39,680 jobs in 1998. In addition to the jobs created by economic expansion, there will be an estimated 6,950 openings generated by the need to replace workers who permanently leave these occupations.

**OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE
SALES AND RELATED GROUP(1)**

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL
SALES AND RELATED	37,280	100.0%	39,680	100.0%
SALESPERSONS - RETAIL(NON-VEHICLE)	10,860	29.1%	11,260	28.4%
CASHIERS	5,210	14.0%	5,700	14.4%
SALES REPS, NON-SCIENTIFIC EX RET	4,540	12.2%	4,810	12.1%
FIRST-LINE SUP/MGR--SALES	3,800	10.2%	4,020	10.1%
STOCK CLERKS--SALES FLOOR	2,110	5.7%	2,260	5.7%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

Although this group is comparatively small, it contains the largest occupation in the county: retail salesperson. This occupation will grow by 400 workers, reaching 11,260 in 1998.

CLERICAL AND ADMINISTRATIVE SUPPORT OCCUPATIONS

The clerical and administrative support occupations are expected to grow by 3,380 jobs, or 5.5 percent, during the 1992-98 projection period. An additional 7,500 job openings will be generated by the need to replace workers who permanently leave these occupations. Secretarial and general office occupations will add 1,940 jobs, accounting for over half the growth in this category. Both general office clerk and general secretary will add over 500 jobs. One out of every twenty jobs in the county is in one of these two occupations.

**OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE
CLERICAL AND ADMINISTRATIVE SUPPORT GROUP(1)**

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL

RECEPTIONISTS, INFORMATION CLERKS	3,080	5.1%	3,410	5.3%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

SERVICE OCCUPATIONS

Service workers are found in a variety of establishments, providing business services; preparing/serving food and beverages; and providing health care, grooming, cosmetic, and other personal services. Service occupations accounted for about 15 percent of the total occupational work force in 1992 and a gain of 3,230 new workers will bring the 1998 total to 46,470. There will be 9,740 additional job openings created by job separations.

**OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE
SERVICE GROUP(1)**

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL
SERVICE OCCUPATIONS	43,230	100.0%	46,470	100.0%
WAITERS AND WAITRESSES	5,030	11.6%	5,280	11.4%

COMBINED FOOD PREP AND SERVICE	2,250	5.2%	2,370	5.1%
COOKS--RESTAURANT	1,760	4.1%	1,900	4.1%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

Waiters/waitresses and guards/watch guards will show the largest absolute gains, while home health care workers will grow the most rapidly--- almost 28 percent in six years. Also growing rapidly during the projection period will be medical assistants, physical therapy assistants and amusement/recreation attendants.

AGRICULTURAL, FORESTRY, AND FISHING OCCUPATIONS

This is the smallest of the major occupational groups. Gardeners and groundskeepers account for 75 percent of the group's employment. There will be an estimated 210 new jobs for gardeners and groundskeepers during the projection period, with a total of 2,240 working by 1998. An additional 200 of these workers will be needed over this period to replace workers who permanently leave this occupation.

**OCCUPATIONS WITH THE LARGEST NUMBER OF JOBS IN THE
AGRICULTURE, FORESTRY AND FISHING GROUP(1)**

OCCUPATION	1992 EMPLOYMENT	% OF TOTAL	1998 EMPLOYMENT	% OF TOTAL

FIRST-LINE SUPERVISORS - AGRICULTURE	20	0.7%	20	0.6%

(1) EXCLUDES NOT ELSEWHERE CLASSIFIED CATEGORIES.

PRODUCTION, CONSTRUCTION, AND RELATED OCCUPATIONS

About 24 of the occupations in this group have 500 or more workers. The largest occupational categories in this group are: mechanics, installers, and repairers; transportation/material moving workers; laborers and helpers; and construction trades. The mobile equipment mechanics occupational category is the largest locally and is anticipated to increase by 7.2 percent during the forecast period. The entire group will employ a projected 69,810 workers by 1998, an increase of 4,330 from the 1992 total. An additional 8,150 job opportunities will occur due to separations.

DESCRIPTION OF TABLES

Table 1 -- EMPLOYMENT BY MAJOR INDUSTRY

This table shows 1986 and 1992 estimated employment and 1998 projected employment along with the percentage of total employment for each major industry division.

EMPLOYMENT includes nonagricultural wage and salary workers except for self-employed persons, unpaid family workers, private household workers, and those involved in labor-management trade disputes. For the government sector, employment includes all civilian employees regardless of the activities in which they are engaged. With the exception of government, industries are classified by the Standard Industrial Classification (SIC) system.

INDUSTRY is a group of firms that engage in similar economic activities. The Standard Industrial Classification (SIC) system was used to categorize industries.

INDUSTRY DIVISIONS group industries into nine major categories, according to the economic activity involved. An industry division refers to a distinct group of private, public, or nonprofit enterprises engaged in producing goods or providing services.

The nine industry divisions are defined as follows:

MINING (SIC 10-14) includes all establishments involved in the extraction of minerals, crude petroleum, and natural gas. It includes quarrying, well operations, milling, and other related activities.

CONSTRUCTION (SIC 15-17) includes establishments engaged in contract construction. This includes new work, additions, alterations, and repairs performed by general and special trade contractors.

MANUFACTURING (SIC 20-39) includes establishments which are usually described as plants, factories, or mills that are engaged in producing or processing non-durable or durable goods. These characteristically use power-driven machines and material-handling equipment.

TRANSPORTATION AND PUBLIC UTILITIES (SIC 40-49) includes enterprises engaged in passenger and freight transportation by surface, water, and air and warehousing and other transportation services. It also includes the communications complex of telephone, telegraph, radio, and television; and the utilities providing gas, electric, and sanitary services.

WHOLESALE TRADE (SIC 50-51) includes establishments involved in the selling of merchandise to retailers; to industrial, commercial, farm, construction contractors, or professional business users; or to other wholesalers.

RETAIL TRADE (SIC 52-59) includes establishments involved in the selling of merchandise for personal or household consumption and rendering services incidental to the sale of goods.

FINANCE, INSURANCE, AND REAL ESTATE (SIC 60-67) includes banks, savings and loan institutions, and security and commodity brokerages, insurance agencies and carriers, real estate sales and management offices, and rental and planning agencies.

SERVICES (SIC 70-89,074,075,078) includes establishments such as hotels, laundries, auto repair shops, theaters, legal services, advertising services, private schools and hospitals, and nonprofit organizations which are engaged in rendering a variety of services to individuals and businesses.

GOVERNMENT includes the legislative, judicial, administrative, and regulatory activities of federal, state, local, and international governments. It also includes federal, state, and local government hospitals and education.

Table 2 -- EMPLOYMENT BY INDUSTRY

This table shows employment and projected employment by industry. The number of jobs is estimated for 1992 and projected for 1998. The column entitled "*SIC*" lists the Standard Industrial Classification code for each industry grouping. The column labeled "*Absolute Change*" provides the projected change in employment between 1992 and 1998. The "*Percent Change*" column is the estimated growth rate over the six-year period.

Table 3 -- EMPLOYMENT BY MAJOR OCCUPATIONAL GROUP

This table shows 1992 and 1998 employment and projected employment for the seven major occupational groups. The "*Percent of Total*" column displays the percentage of total employment each major occupational group represents. The "*Absolute Change*" column gives the number of job opportunities resulting from the creation of new jobs. "*Percent Change*" shows the percentage change for each occupational group.

OCCUPATIONAL GROUPS are groups of occupations with similar skills and/or educational requirements, based on the OES groupings. There are over 700 detailed occupations and close to 100 summary level occupations in the Occupational Employment Statistics (OES) classification system.

The seven major occupational groups are defined as follows:

MANAGERS AND ADMINISTRATIVE occupations are top and mid-level managers, administrators, and executives. Primary duties are policy making, planning, staffing, directing, or controlling the activities of a firm. First-line supervisors are excluded from this category.

PROFESSIONAL, PARAPROFESSIONAL, AND TECHNICAL occupations are concerned with theoretical or practical aspects of such fields as science, art, education, health, law, and business relations. Professional occupations generally require long and intensive preparation, while technical occupations work closely with professional personnel and are required to have a combination of basic scientific knowledge and specialized education.

SALES AND RELATED occupations are concerned with influencing customers to buy commodities, services, real estate, and investments.

CLERICAL AND ADMINISTRATIVE SUPPORT occupations prepare, transcribe, systematize, and preserve written communications and records; distribute information; and collect accounts.

SERVICE OCCUPATIONS prepare and serve food and drink; provide lodging and related services; provide grooming, cosmetic, and other personal and health care services; maintain and clean clothing and other wearing apparel; provide protection for people and property; attend to the comfort or requests of patrons of amusement and recreation facilities; and perform cleaning and maintenance services in the interiors of buildings.

AGRICULTURAL, FORESTRY, AND FISHING occupations in this report include only forestry workers, nursery workers, animal caretakers, and gardeners and groundskeepers.

PRODUCTION, CONSTRUCTION, OPERATING, MAINTENANCE, AND MATERIAL HANDLING are skilled, semiskilled, and unskilled workers performing machine and manual tasks involving production, construction, operating, maintenance, repair, and material handling operations.

Table 4 -- OCCUPATIONS WITH THE GREATEST ABSOLUTE JOB GROWTH

This table lists the occupations that are projected to register the largest absolute change between 1992 and 1998. In general, these occupations are numerically large. Some have average projected rates of growth, but because of their employment size will add significant numbers of new jobs over the 1992-1998 period.

Table 5 -- OCCUPATIONS WITH THE FASTEST JOB GROWTH

This table lists the occupations with the greatest projected percentage increases. It provides a different perspective to future occupational employment changes. It is important to note that some of these occupations are increasing rapidly from relatively small employment levels and, therefore, are not found in the list of occupations that will add the most new jobs.

Table 6 -- OCCUPATIONAL EMPLOYMENT PROJECTIONS

This table provides occupational detail for up to 700 occupations. Annual average employment in each occupation is shown for 1992 and 1998. The column headed "*Absolute Change*" presents the number of job opportunities resulting from the creation of new jobs. The "*Percent Change*" column shows the percentage change for each occupation. The next column, "*Openings Due to Separations*", shows job opportunities that are created by workers leaving the occupation. Also included in this table is the Occupational Employment Statistics (OES) codes column. It shows the distinctive California OES code for each occupational title.

Line numbers in Table 6

Each occupation in Table 6 is identified by a line number. The Alphabetical Index of Occupations section found in this publication may be used to locate individual occupations in the detailed table. The same line numbers are used in all area reports for 1992-1998. Line numbers may be different for other time periods. Not all line numbers appear in all counties; missing line numbers indicate occupations with no employment, or employment below the area's cutoff point for publishing.

METHODS AND ECONOMIC ASSUMPTIONS

OVERVIEW

Changes in occupational employment over time result from two principal sources. Changes in the number, size, and type of employers within a given geographical area will affect the demand for certain occupations. Also, technological advances in production and changes in regulations will affect the occupational mix. In developing occupational employment projections, both of these components must be addressed. Following is a discussion of how employment projections are developed, beginning with a description of data sources followed by a description of the steps involved.

PRINCIPAL DATA SOURCES

Employment by Industry

The Employment Development Department (EDD) collects payroll data from all private employers and government entities covered under the unemployment insurance, disability insurance, and personal income tax programs. Excluded from these data are the self-employed, unpaid family workers, and private household workers. Each reporting unit is classified by EDD according to the Standard Industrial Classification (SIC) System. The SIC system consists of three levels of detail: the two-digit major industry division, the three-digit sub-industry division, and the four-digit specific industry division. All data are identified by the county in which reported jobs are located, and are collected for each month of the year.

Occupational Staffing Patterns

Occupational employment estimates are based on survey data collected through the Occupational Employment Statistics (OES) program. The OES survey is a periodic mail survey of nonfarm employers conducted by EDD in cooperation with U.S. Bureau of Labor Statistics. The survey is based on a sample designed to represent the universe of employers in each state. In California, data are collected for over 700 occupations at the four-digit SIC level of detail.

The OES data used in this report were collected over a three-year period (1989-91), with manufacturing establishments surveyed the first year, nonmanufacturing establishments in the second year, and trade and government establishments in the third year.

PROJECTIONS BY INDUSTRY

The industry projections included in this report were developed in two phases. First, projections were developed at a summary industry level based on two-digit to three-digit SIC classifications. The second phase was to disaggregate these projections to the four-digit industry level.

In the first phase, industry projections were based on the historical relationship between an area's employment in a given industry and California employment in that

industry. In the model used, area employment by industry was specified as a function of California employment in the same or a related industry, and total employment in the area. Area specific total employment was included as an independent variable to capture the employment effects accruing to an industry resulting from the expected overall performance of the local economy compared to the state over the projection period. The local total employment projection used in this phase was based on its relationship to statewide total employment over time, while the California industry projections used were developed as part of the statewide projections process.

As noted above, in the second phase of this process, the summary level industry projections were disaggregated into their four-digit components using the proportions for the base year, 1992. The resulting four-digit projections were reviewed and adjusted if it was determined that a particular four-digit industry would likely grow faster or slower than its associated summary industry total. Last, the four-digit projections were adjusted to group private and public hospital and education employment for consistency with the OES survey.

PROJECTIONS BY OCCUPATION

The distribution of industry employment by occupation is performed in three steps. OES survey responses are summarized by industry and firm size and matched with each SIC and firm size combination in the local area. In cases where local OES responses are not available, either statewide responses or another area's responses are substituted. The survey data are then expanded to the annual average employment level for each industry. This results in estimates of employment by occupation within the four-digit SICs for the base year, 1992.

Next, base year staffing patterns are adjusted to account for projected shifts in the occupational distributions due to technological changes. These projected changes are derived from special studies conducted by the U.S. Bureau of Labor Statistics. Applying these changes to the base year staffing patterns results in staffing patterns by four-digit SIC for the target year, 1998. Target year staffing patterns are applied to the industry employment projections to produce occupational employment projections within four-digit SIC. Data by occupation are then summed to get the 1992 and 1998 occupational estimates. The difference between the 1992 occupational estimates and the 1998 projections represents the net job openings resulting from industry growth and from technological and regulatory changes.

Last, it is important to account for openings that result from net separations. In publications prior to 1993, separations counted only workers leaving the labor force as a result of retirement, death or other long-term conditions. They did not count persons changing occupations or changing employers but remaining in the same occupation. Our new and broader separations estimates are based on the BLS "net separations" data described in the November 1991 *Monthly Labor Review*. The method used by BLS to determine "net separations" is based on projected changes in the level of employment by five-year age group within an occupation. The changes are adjusted to discount overall occupational growth. For each age group, if employment declines as the group ages, total separations must exceed total entrants, and the difference equals net separations for the age group. If employment rises as the group ages, total

entrants must exceed total separations, the difference equals net entrants and net separations for the age group is set to zero. The total of net separations across all age groups then gives the number of openings created by people leaving an occupation which are expected to be filled by net entrants from other age groups, usually younger ones. These entrants into the occupation may come from any source--promotions, transfers from other occupations, new entrants to the labor force, or transfers from other geographic areas. But to the extent that training is required for an occupation, net separations may indicate something about training needs to replace persons who leave the occupation. Please note, the method understates net separations in occupations requiring little training, such as waiter/waitress, that often serve as first jobs and have substantial net separations in young age groups. The net separations rates used are national and have not been adjusted to reflect different age distributions in the county's occupations.

ECONOMIC ASSUMPTIONS

The industry and occupational projections in this report are based on the following assumptions:

- a. The institutional framework of the U.S. economy will not change radically.
- b. Recent technological and scientific trends will continue.
- c. The long-term employment patterns will continue in most industries.
- d. Federal, state, and local government agencies will continue to operate under budgetary constraints.
- e. No major events, such as war, will occur that will significantly alter the industrial structure of the economy, the occupational staffing patterns, or the rate of long-term growth.
- f. Population growth rates and age distributions will not differ significantly from Department of Finance projections presently available.
- g. Attitudes toward work, education, income, and leisure will not change significantly.

ALPHABETICAL INDEX OF OCCUPATIONS

The alphabetical index of occupations is designed to aid in locating individual occupations in the detailed occupational table.

The first column of the index lists, in alphabetical order, each occupation of the detailed occupational employment table (TABLE 6).

The second column lists the line number which is used to locate individual occupations. This number is unique to each OES occupation and appears in column #1 of the detailed table.

The third column indicates the OES code of the occupation. Note that not all occupations will appear in all counties.
